

MEASUREMENT & BENCHMARKING TOOL

The web-based data abstraction and reporting program ensures hospitals measure the right patient metrics, set industry-standard goals, and can compare benchmarks with other hospitals.

QUALITY IMPROVEMENT SUPPORT

Each participating hospital or system works with an American Heart Association Quality Improvement Consultant for implementation, data interpretation, reporting, 1-on-1 support and pre-built patient resources.

ALWAYS EVOLVING

New guidelines are included as program updates. From there, the registry process resumes as hospitals continue collecting data to inform care individually and across the country.

REGISTRY & CONTRIBUTION TO NATIONAL RESEARCH

Registry data is shared with American Heart Association experts and researchers across the country to continue to bring up-to-date, evidence-based guidance to healthcare professionals and the public.
